Revision 02

Illustrated asset catalogue

Clean ink collection for browsing, choosing and importing complete art packs.

Gothic oak door

Skeletal archer

Final latest-only collection

61 original logical groups: 58 revised or repacked groups and 3 unchanged baseline groups. Revised packs may combine new and retained art. The index lists every selected archive, checksum and asset role.

6 October 2026 / Private collection

Using the collection

A visual guide to the selected packs; the JSON and TXT indexes carry the full inventory.

Download once

Download the private Drive folder, then use the selected archive list in the asset index. Extract complete ZIPs into one collection directory. Shared archives need only one extraction. All 65 selected art archives are verified in the private folder.

Keep complementary parts together

Scenic mechanisms are delivered as three ordinary ZIPs. They contain complete files and share an extraction root. Extract all three into the same destination; never concatenate their binary data.

Read the artwork correctly

Upright painted cutouts preserve their authored view. Do not rotate them arbitrarily in 3D as though they were full geometry. Use authored direction variants where provided. Floor and wall textures have different projection rules.

Count designs separately from files

A design can have several states, clips, timeline frames, atlases and padded import images. These are distinct measures. Examples are resized for browsing; dark effect swatches are presentation backgrounds only. Related subject alternatives are not a global unique-design count.

Respect the hero lock

The original C/RUST hero reference stays byte-identical. The retained original-view idle and actor view studies do not constitute a new approved canonical hero production rig.

Locked original view only. Reference remains untouched.

Import checks and limits

Read README_Import.txt and each pack manifest before integration.

Camera and source orientation

Target: orthographic 35.2643897 degree elevation, 45 degree azimuth and 13 m gameplay vertical span. Generated perspective remains approximate. Exact projection controls are not calibration of painted geometry. Apply the scene camera once to raw top-down floors or front-wall surfaces.

Pivots and padded copies

Native masters are untouched. Padded import copies shift the pivot by the documented integer canvas offsets. Their larger canvas does not imply a larger world-space object. Preserve original canvas, trim rectangle and pivot together.

Source timing and previews

Read source fps and clip duration from metadata. A 60 Hz preview may repeat 12, 24 or 30 fps source drawings. Preview playback is not a unique-frame count, engine validation or performance certification.

Alpha and atlas import

Follow straight-alpha, colour-space, extrusion and gutter notes. Test light and dark backgrounds at target size. Disable mipmaps unless pack guidance and engine testing support per-sprite mip generation.

What still needs an engine test

Verify scale, grounding, filtering, sorting, state transitions, loop timing and interactions. Illustrated ground repeats can show fine seam mismatches or motif repetition. No collision, lighting or engine frame-rate certification is implied. Current bounded review status is in QA_STATUS.json. Containers01 and Mechanisms02 embedded pending labels are pre-audit snapshots.
